Freedom Communication Technologies

Firmware release 2.3.4 adds more new features to the R8100 & R8000!

AutoTune™ for Harris XG-100M™ Mobiles

AutoTune for Harris XG-100 mobile radios was developed in close collaboration with Harris and key Harris users. Eric Makovsky, Harris Product Line Manager, said *'We were pleased to work with Freedom to provide this valuable tool for customers with fleets of XG-100M radios.'*

Support for the XG-100M is just the latest in our expanding line of AutoTune options for Harris radios. We introduced support for XG75™ and model 7300™ radios last year. And we will begin shipping AutoTune for XL-200™ radios this summer. Freedom is proud to support this important line of products from Harris.

AutoTune for RELM KNG™ Portables

We are extremely pleased to introduce AutoTune capability for the BK Technologies (formerly RELM Wireless) KNG series portables. These radios are used by many important federal, state and local government agencies and first responders, and our AutoTune will help these entities to keep these radios performing their important missions.

TC Communications - Leased Line Replacement

Use Your Existing IP Network

Microwave (Ethernet, T1/T3, OC3)
Ethernet LAN/WAN (Fiber, Copper)
MPLS
SONET/SDH

4-Wire 600 Ω Analog and Dry Contact over IP Gateway TC3846-6

Eliminate recurring monthly fees
Clear channel over fiber/Ethernet with no interference
Analog direct to IP - Uncompressed DS0 (64Kbps)
Supports Guard / Pilot tone (PTT, COR) operation
1-4 Scalable Channels of Analog and E&M over IP

Compatible with Raytheon/JPS SNV-12 voter
Leased Lines can be replaced with minimal impact to the existing network. Networks can keep their existing legacy devices like 4-Wire Analog Radios and connect to their IP/Ethernet.

EVANS Announces Strategic Partnership with the Denise Amber Lee Foundation

We are excited to partner with the Denise Amber Lee Foundation, the pre-eminent training organization committed solely to the Public Safety sector. For every console EVANS sells to Public Safety organizations, we will make a donation to the Foundation. We are also participating in its 9-1-1 training summit being held in Charlotte, North Carolina in November, as well as other select training sessions nationwide.

VHF Low-Loss Transmitter Combiner For Digital, Analog

Telewave's American-made M108-150 VHF low-loss transmitter combiner features our T-1560M medium power isolator for digital or analog trunking systems with 100 percent duty cycle, including P25 and MotoTRBO/DMR. The M108-150 covers 148-174 MHz at 115W per channel, with 8-inch, 1/4-wave cavities for close channel spacing, and up to eight channels in a standard 19-inch rack. Each panel combines four channels into a common antenna in 24.5 inches of rack space. Telewave is a GSA Schedule contractor, certified to ISO 9001:2008. We provide a full range of system engineering services and custom design. www.telewave.com

RuggON Rugged Computers

With the RuggON PM-511's computing device, officers can use detection tools such as radars to record crucial capture images of incidents, detect traffic violations, scan license plates, and link to database for real-time information. In addition, the rugged tablet also offers seamless and stable wireless communications so that officers can receive real time information.

Officers that are working under rainy weathers don't have to worry when using RuggON PM-511 as its IP65 water & dust proof can protect the device from heavy rain. Different from consumer tablets the PM-511 is suitable to withstand situations as it can withstand 6-foot drop resistance and comes with MIL-STD-810G anti-shock & vibration. The ability to endure extreme temperatures is another one of PM-511's notable features. PM-511 supports operating temperatures of -20c to +50c along with storage temperatures between -30c to +70c. RuggON PM-511 is the dependable device to withstand these harsh environments since it offers the durability that commercial tablets don't provide.

PM-511 can support radar and camera for the purpose of speed violation detection. Once the tablet is connected on the detection devices, the captured vehicle information such as car model, license plate, car speed, driver information and other details will be displayed on the tablet and sent to headquarters for analysis. This information allows the officer to quickly determine the related fines, without wasting time on redundant paperwork.

The officer can also use the tablet to send information to other police units for further investigation. Built with durable ruggedness and reliable connections, RuggON PM-511 is the ideal choice for law enforcement tasks now being used by the City of New York.
